# WAXING for women and men

We recommend examining the treatment area before waxing so as to select the wax that best matches the customer's skin type and condition. For peeling or very dry and/or tanned skin, we recommend using creamy waxes containing titanium dioxide.

## WAX SELECTION CHART

Waxing is one of the most common beauty care treatments. Not only does it remove body hair, it also makes our skin more receptive to other care products, which is why it is essential to offer our customers the very best products and application protocols.
